1861-2.

VICTORIA.

AGRICULTURAL AND LIVE STOCK

STATISTICS OF VICTORIA,

FOR THE

YEAR ENDING 31ST MARCH, 1861;

WITH

PRELIMINARY STATISTICAL NOTES.

By the Registrar-General of Victoria.

PRESENTED TO BOTH HOUSES OF PARLIAMENT BY HIS EXCELLENCY'S COMMAND.

By Authority:

JOHN FERRES, GOVERNMENT PRINTER, MELBOURNE.

No. 119.

REPORT.

Registrar-General's Office,
Melbourne, 31st December, 1861.

SIR,

On the 25th June, 1861, I had the honor to publish an approximate General Summary of the Agricultural Statistics, showing the acreage, occupied and cultivated, and the quantity of produce raised in each County and Pastoral District during the year ending 31st March, 1861. I now submit detailed Tables of the same Statistics, and take the opportunity further to illustrate the subject in the following Report.

Agricultural Statistics for the year ending 31st March, 1861.

2. Two years ago I issued the first of a series of "Statistical Notes on the Progress of Victoria from the Foundation of the Colony." The first and second series of the Notes were published, for the sake of convenience, in connection with the Agricultural Statistics of 1859 and 1860; but they embraced many important subjects other than the development of our food-industries. At a later period, in a prefatory essay to the Victorian Exhibition Catalogue of 1861, I expanded these notes so as to comprise a large mass of facts additionally illustrative of our physical, intellectual, and moral progress. Subsequently to the publication of this essay an Inter-Colonial Statistical Conference was held (during the months of October and November last) at my offices in Melbourne, under the authority of certain of the Australian Governments. The officers who attended this conference were:—1. The Registrar-General of New South Wales (Christopher Rolleston, Esq.); 2. The Registrar-General of Queensland (Frederick Orme Darvall, Esq.); 3. The Superintendent of the South Australian Census (Josiah Boothby, Esq.); and 4. The Registrar-General of Victoria. These gentlemen were unanimous in their conclusions as to the desirability of collecting and publishing the annual statistics of each colony on a simple and uniform plan. They held nine formal sittings, and went carefully over every return hitherto published in their respective yearly statistics. They eventually agreed upon such modifications of the old stereotyped form of Colonial Blue Book as will have the effect of altogether changing its style and character. It would be premature for me to enter on a description of our proposed future publications: but I may mention that henceforth the Statistic Year Books of New South Wales, South Australia, Queensland, and Victoria will, in the main, accord in their groupings with those adopted in the "Statistical Notes" and "Prefatory Statistical Essay" above alluded to. This agreement on the part of Australian Colonies to unite in carrying out unity of plan in statistical collection and tabulation, not only in regard to the Census, but in respect to all other important data, will not only be satisfactory to colonists themselves, but will be highly approved by statists in every part of the world. In consequence of this arrangement it will not be necessary for me henceforth to take advantage of the publication of the Agricultural Statistics in detail to prefix, as heretofore, a tractate on the general progress of the country. That can appear in connection with the full General Statistics of each year. I now, therefore, in the following paragraphs limit my observations to the Agricultural and Pastoral Statistics of the year ending 31st March, 1861.

Statistical Notes on the Progress of Victoria, Parts I and II.

Prefatory essay to *Catalogue of Victorian Exhibition of* 1861.

Statistical Conference held in Melbourne, October and November, 1861.

A uniform plan of statistics for the Australian Colonies resolved upon.

Reports on General Progress of the Colony in future to accompany the Year Book Statistics.

NUMBER AND EXTENT OF HOLDINGS.

NUMBER AND EXTENT OF HOLDINGS.

3. The holders of purchased land in the year ending 31st March, 1861, numbered 13,653, against 13,175 in the year ending 31st March, 1860.

Number of holders of purchased land, 1860-1861.

Increase or decrease of different classes of holders.

The increase is not so great as in the previous year, in which the holders were augmented by 1,602, being an addition of 13·8 per cent., whilst in the year under review the augmentation was only 478, or 3·6 per cent. In the former year all the classes of holdings, without exception, showed increased numbers, but in the latter, the first four classes, comprising all those under 50 acres, had decreased by 93. The remaining five classes, including all those from 50 acres upwards, were more numerous; a tendency to occupy larger lots being thereby indicated. The increase or decrease in the number of each class of holdings is seen in the following table:—

Tendency shown to occupy larger lots.

NUMBER OF HOLDINGS OF EACH CLASS, 1860-1861. TABLE A.

TABLE A.—VICTORIA.—The Number of Holdings of each Class in the two Years ending 31st March, 1860 and 1861, with the Increase or Decrease of each Class.

SIZE OF HOLDINGS.	Number of Holdings of each Class.		Increase.	Decrease.
	1860.	1861.		
1 acre to 5 acres	1,082	1,042	...	40
5 acres to 15 „	1,905	1,900	...	5
15 „ to 30 „	1,439	1,402	...	37
30 „ to 50 „	1,380	1,369	...	11
50 „ to 100 „	2,477	2,573	96	...
100 „ to 200 „	2,316	2,520	204	...
200 „ to 350 „	1,220	1,340	120	...
350 „ to 500 „	327	380	53	...
500 „ and upwards	1,029	1,127	98	...
TOTAL	13,175	13,653	478	...

Increase of the land in occupation.

4. The extent of land in occupation was increased during the year by upwards of half a million of acres (501,426¼), an augmentation somewhat larger than that between 1860 and 1859, when the increase did not quite reach half a million of acres (496,450½). In the previous year (1859) the increase in the extent of land occupied was 406,022¼ acres, and in the year before that (1858) it was 580,785¾ acres.

Increase or decrease of the different classes of holdings.

5. All the classes of holdings showed an increase in the quantity of land in occupation except the three first, comprising all lots of a less area than 30 acres, and these showed a slight decrease. The extent of land embraced in holdings of each class during the years ending 31st March, 1860 and 1861, is compared in the following table, whereby it is seen that of the 501,400 additional acres occupied during the year, 401,400, or upwards of four-fifths, were in lots of the largest size, viz., those of 500 acres and upwards, whilst nearly 35,000 acres, or upwards of a third of the remainder were in lots of from 100 to 200 acres:—

EXTENT OF LAND IN HOLDINGS OF EACH CLASS, 1860-1861. TABLE B.

TABLE B.—VICTORIA.—The Aggregate Extent of Land comprised in Holdings of each Class in the two Years ending 31st March, 1860 and 1861, with the Increase or Decrease of each Class.

SIZE OF HOLDINGS.	Aggregate Extent of Land comprised in the different classes of Holdings.		Increase.	Decrease.
	1860.	1861.		
	acres.	acres.	acres.	acres.
1 acre to 5 acres	3,008	3,007¼	...	¾
5 acres to 15 „	16,558	16,388½	...	169½
15 „ 30 „	30,032½	29,232½	...	800
30 „ 50 „	52,288½	54,313¾	2,025¼	...

100 „ 200 „	317,518¾	352,136¾	34,618	...
200 „ 350 „	318,485½	345,344¾	26,859¼	...
350 „ 500 „	133,100	156,673¾	23,573¾	...
500 acres and upwards	1,970,637	2,372,060	401,423	...
TOTAL	3,015,607¼	3,517,033½	501,426¼	...

Increase or decrease of land in occupation in the different counties.

6. All the counties showed an increased breadth of land in occupation, with the exception of Bourke and Heytesbury, in both of which there was an

apparent decrease. The greatest increase, amounting to upwards of 98,000 acres, took place in Grenville, a county containing land suitable both for pastoral pursuits and agriculture, and also including some of our leading gold-fields within its boundaries. The next largest increase, amounting to upwards of 56,000 acres, was in the fine agricultural county of Villiers ; next in order came Dundas, which, although the largest county in Victoria, and also the one possessing some of the finest land, had not, previous to the year reviewed, 47,000 acres in occupation ; but, in consequence of portions of the rich land bordering on the Wannon and its tributaries having been brought into the market, this quantity was, during the year, supplemented by the addition of 43,000 acres. Hampden, Ripon, Grant, and Talbot, each showed an increase of upwards of 30,000 acres of occupied land ; the Wimmera, the Loddon, the Murray, and Gipps Land, each showed an increase of over 20,000 acres ; Mornington, Normanby, Rodney, Anglesey, and Dalhousie, each showed an augmentation of upwards of 10,000 acres ; Evelyn and Follett each showed upwards of 5,000 additional acres, and Polwarth an increase of 372 acres. In Bourke and Heytesbury there appeared a diminution to the extent, in the former, of 14,190 acres, and in the latter, of 2698 acres, making a total decrease in the two counties of 16,888¼ acres, against an increase of 518,314½ acres in the other counties, leaving a surplus of increase, as has been already stated (par. 4), amounting to 501,426¼ acres.

7. The quantity of land in occupation in each county during the last two years, with the amount of its increase or decrease in the latter year, will be observed at one view in the following table :—

Land occupied in each county and district, 1860-1861. Table C.

Table C.—Victoria.—The Aggregate Extent of Land in Occupation in each County and Pastoral District in the two Years ending 31st March, 1860 and 1861, with the Increase or Decrease in each during the Year.

Counties and Districts.	Aggregate Extent of Land in Occupation in each County and Pastoral District.		Increase.	Decrease.
	1860.	1861.		
	acres.	acres.	acres.	acres.
Anglesey	19,091½	34,773¾	15,682¼	...
Bourke	623,657¼	609,467	...	14,190¼

Rodney	23,184½	39,385½	16,201	...
The Murray	116,603¼	138,873¾	22,270½	...
The Wimmera	28,398	57,484	29,086	...
Total	3,015,607¼	3,517,033½	501,426¼	...

Average size of holdings, 1858-1861.

8. The average size of holdings is gradually increasing from year to year, or, in other words, the extent of land in occupation increases faster than the number of occupiers. Thus, in 1858 the average size of holdings throughout the Colony was 206 acres, in 1859 it was 218 acres, in 1860 it was 229 acres, and in 1861 it was 258 acres.

Average size of holdings in each county and district.

9. The average area of holdings in each county and district will be found in the first column of Table VII., whereby it is ascertained that the

largest holdings are in the comparatively insignificant counties of Hampden and Follett, in the former the average being no less than 1,324 acres, and in the latter 1,071 acres. In Rodney the average is 757 acres, and in Dundas 602 acres. The only counties in which the average is less than 200 acres are the Loddon and Dalhousie, in each of which it is 164 acres, and Bourke, in which it is 170 acres.

Counties in which size of holdings is greater or less than the average of the Colony.

10. In eight counties and districts the average size of holdings is *less* than the general average of the Colony, viz., Dalhousie, the Loddon, Bourke, Talbot, Grant, the Murray, Normanby, and Evelyn. In each of the remaining thirteen the average area of holdings is *greater* than the average of the Colony.

Comparison with former years.

11. On comparing the average size of holdings in the different counties during the last three years, it is found that in some of them but little change has taken place, whilst in others the fluctuation has been considerable. Thus, holdings have been constantly largest in Hampden, while Follett has stood steadily second on the list throughout the whole period; but Rodney, which now stands third, was fourth in 1860, and seventh in 1859. Bourke has been nineteenth on the list throughout the whole period, and Grant has stood in the relation of seventeen, eighteen, and seventeen. The figures against the different counties in the following table show the order in which they have stood as regards the average size of holdings during the last three years :—

ORDER OF COUNTIES AS REGARDS SIZE OF HOLDINGS, 1859-1861. TABLE D.

TABLE D.—VICTORIA.—The Order of each County and Pastoral District in regard to the Average Size of Holdings during the Years ending 31st March, 1859, 1860, and 1861.

COUNTIES AND DISTRICTS.	Year ending 31st March.		
	1859.	1860.	1861.
Anglesey	16	12	7
Bourke	19	19	19
Dalhousie	21	20	21
Dundas	6	7	5
Evelyn	11	13	14
Follett	2	2	2
Grant	17	18	17
Grenville	8	6	4
Hampden	1	1	1
Heytesbury	3	5	10
Mornington	5	8	12
Normanby	14	16	15
Polwarth	4	3	6
Ripon	13	10	8
Talbot	18	17	18
Villiers	12	14	13
Gipps Land	9	11	11
The Loddon	21	21	20
Rodney	7	4	3
The Murray	15	15	16
The Wimmera	10	9	9

Average size of farms, 1858-1861.

12. For the purpose of ascertaining the average size of *farms*, as distinguished from that of *holdings*, it has been the practice to deduct from the total number of the latter all those under five acres, as being merely market gardens, and all those above 500 acres, as being occupied more for grazing purposes than agriculture. By this means it was found that in 1858 the average size of farms was 90 acres, in 1859 it had risen to 95 acres, in 1860 it had again fallen to 94 acres, and in 1861 it had again risen to 103 acres.

Average size of farms and squatting holdings.

13. By deducting the land on stations from the general total of purchased land in occupation, and dividing the residue by the number of non-squatting landholders, we have an average of 140 acres to each holder, and by dividing the land so deducted by the number of squatting holders

of purchased land, we obtain an average of no less than 2,790 acres to each squatter.

Extent of land in occupation to each individual of the population.

14. The extent of land in occupation to each individual in the Colony averaged 6·5 acres in the year under review. In 1860 it averaged 5·6 acres, and in 1859 it averaged 4·9 acres; an increase being thus shown in two years of upwards of an acre and a half of occupied land per head to each individual of the population.

Cultivation of the Land.

Land in cultivation during the last three years.

15. The area of land in cultivation in the year ending 31st March, 1861, amounted to 419,380 acres, against 358,728 acres in the previous year, and against 298,959 acres in the year before that (ending 31st March, 1859). The increase of tillage during the year amounted to 60,652 acres, which has been about the average annual increase of the last six years. The increase from year to year displays considerable uniformity, as may be observed by the following figures :—

Increase of tillage, 1856–1861.

Increase of Tillage in the Year ending 31st March.

	acres.
1856	60,420
1857	64,847
1858	57,747
1859	61,230
1860	59,768
1861	60,652
Mean of six years	60,777

16. A comparison of the number of acres under crop in each county and pastoral district during the two past years is made in Table III., p. 6, by which it appears that an increase took place in every county and district, with the single exception of Follett, wherein the cultivation was apparently less by six acres.

Increase of tillage in each county and district.

17. The greatest absolute increase, amounting to 16,569 acres, was in Talbot; the next largest augmentation, amounting to 8,087 acres, being in the Murray; Dundas comes next in order, showing an increase of 6,741 acres; then Bourke, with an increase of 5,547 acres; Grant, Grenville, and Villiers follow, each showing an increase of about 3,000 acres; then Gipps Land, with nearly 2,000 additional acres; and then Ripon, Hampden, and Normanby appear, each with an increase of upwards of 1,000 acres. In each of the remainder the increase of cultivation was less than 1,000 acres; the smallest augmentation being in Polwarth, where the land under tillage was only 28 acres in excess of that of the previous year.

Proportional increase of cultivation in each county and district.

18. The proportional increase upon the previous year, of land under cultivation, as seen by the same Table III., was greatest in the Murray and the Wimmera, namely, in the former upwards of 56 per cent., and in the latter more than 52 per cent. In Hampden the increase was 47 per cent. In Gipps Land it was 43 per cent., in Dundas 41 per cent., and in Talbot, the county which showed the greatest absolute increase, it was 37 per cent.

Average of land cultivated by each occupier, 1857–1861.

19. It has been already stated that the extent of land in occupation increases faster than the number of occupiers; this is also the case with the land under cultivation. In the year under review the average area cultivated by each holder was 30·7 acres, against 27·2 acres in the previous year. In the year before that (1859) 25·8 acres under tillage was the average to each occupier; in 1858 the average was 23·2 acres, and in 1857 it was 23·9 acres. With reference to the two last mentioned years, it is, however, right to state that, previously to the year 1859, holders of allotments of a less area than one acre were returned with the other occupiers, which has not been done since that date, so that the change is not quite so great as stated.

Proportion of occupied land in cultivation, 1857-1861.

20. The proportion which the cultivated land bears to that in occupation has varied but slightly during the last five years, as is seen by the following figures:—

Percentage of Occupied Land in Cultivation.

1857	11·74
1858	11·25
1859	11·87
1860	11·89
1861	11·92

Average number of acres cultivated by each holder in the different counties.

21. The average number of acres of land cultivated by each occupier, and the proportion of occupied land in cultivation in each county and district, are given in the third and fourth columns of Table VII., p. 8, whereby it is shown that in Ripon as many as 73½ acres are cultivated by each holder; the next largest quantities being in Rodney, where over 44 acres are so cultivated; in Talbot, where exactly 44 acres, and in Dalhousie, where 43 acres are cultivated by each. In the Murray, Villiers, Grenville, and Grant districts upwards of 30 acres are cultivated by each occupier, and upwards of 20 acres in like manner in Heytesbury, Hampden, Bourke, Evelyn, and Anglesey. The smallest average is in Follett, where the quantity cultivated by each holder is only 12 acres. The county of Normanby and the Wimmera district likewise present a low average, only 14 acres to the occupier being cultivated therein ; as also does Dundas, in which there are but 15 acres cultivated to each holder.

Proportion of occupied land in cultivation in the different counties.

22. The proportion of the occupied land in cultivation is greatest in Dalhousie, where 26 per cent. is cultivated. Talbot comes next, with 22 per cent.; the Loddon follows with 18 per cent., and the Murray and Ripon appear with 16 per cent. In Follett the tillage extends over 1 per cent. only of the occupied land; it covers 2 per cent. in Hampden, and 2½ per cent. in Dundas.

Class of holders cultivating most largely.

23. The total quantity of land cultivated by occupiers of different sized holdings is found in the fourth column of Table VIII., p. 8 ; and the average area of land placed under cultivation by each of the classes, the quantity of land cultivated by each class in proportion to the total area under cultivation, and the quantity of land cultivated in proportion to the extent held by each class, will be found in the third, fifth, and sixth columns of Table IX., p. 9 ; by examining which it will be seen that the greatest extent of land is cultivated by holders of lots ranging from 100 to 200 acres, 115,729 acres, or 27·6 per cent. of the total tillage, having been placed under cultivation by this class. The next largest quantity of cultivation, 80,742 acres, or 19·3 per cent. of the total, is due to the industry of holders of allotments between 200 and 350 acres in extent ; close to which, in point of the amount of their cultivation, are holders of lots of from 50 to 100 acres, showing 79,264 acres under tillage, or 18·9 per cent. of the total. The entire area cultivated by these three classes amounts to 65·8 per cent., or very nearly two-thirds of the whole, and this proportion, as regards the same classes, has remained unchanged for the last three years.

Proportion of land cultivated by holders of the largest class.

24. The land cultivated by holders of allotments of the largest class, those of 500 acres and upwards, has amounted for the last two years to about 14 per cent. of the total, proving that agriculture as well as pasture is attended to by the large landholders, although the proportion cultivated by them is not quite so high as it was three years ago, when 16 per cent. of the tillage resulted from their enterprise.

Average extent of land cultivated by different classes of occupiers.

25. The largest quantity cultivated per holding is upon allotments of from 350 to 500 acres, 76 acres being the average. The next largest average is on lots of from 200 to 350 acres, which show about 60 acres of cultivation. After these are lots of 500 acres and upwards, showing on the average about 53 acres cultivated. Then lots of from 100 to 200 acres, averaging about 46 acres of tillage. On lots between 50 and 100 acres in extent, about 31 acres

are cultivated on the average; about 11 acres on lots of from 30 to 50 acres; about 6 acres on lots of from 5 to 15 acres, and about 2 acres upon lots of from 1 to 5 acres.

Proportion of their holdings cultivated by each class of occupiers.

26. It may reasonably be supposed that a larger proportion of each of the small allotments is cultivated than of the larger, and such is found to be the case, each successive class showing a reduced percentage as compared with the one immediately preceding it. Thus, holders of lots of from 1 to 5 acres cultivate 76 per cent., or upwards of three-fourths of their holdings; those of lots between 5 and 15 acres cultivate 67 per cent., or about two-thirds; and those of lots between 15 and 30 acres cultivate about 54 per cent., or more than one-half, and so on, the proportion diminishing at every step as the holdings increase in size, until, on holdings of 500 acres and upwards, it is found that upon the average only $2\frac{1}{2}$ per cent., or no more than one-fortieth of each holding, is cultivated.

Land cultivated in proportion to the population, 1857-1861.

27. The land in cultivation continues to extend from year to year, much faster than the population of the Colony, as will be seen by the following figures:—

In 1857 there were	100	acres in cultivation to every	228	persons.
In 1858	„	„	199	„
In 1859	„	„	161	„
In 1860	„	„	149	„
In 1861	„	„	129	„

Proportion of land cultivated to each individual in the Colony.

28. Thus, in the year under review, 100 acres were cultivated to every 129 persons in the Colony, or about four-fifths of an acre to each individual. It is probable that, in another year, the cultivation will amount to an acre per head.

Nature of the Crops.

Nature of the crops.

Principal crops.

Wheat.

29. The principal crops cultivated in the year 1861, as in former years, were wheat, oats, barley, potatoes, hay, and green forage. The area under the first and most important of these, amounted in that year to 161,252 acres, or upwards of 38 per cent. of the area under all crops. In the previous year (1860) the land under wheat amounted to 107,093 acres, so that an increase under this particular crop of 54,159 acres took place during the year. This increase is nearly double that of the previous year (1859), which only showed 28,858 acres above the quantity under wheat in the year 1858.

Increase of land under wheat.

Proportion of wheat to total cultivation.

30. Not only, however, is the area under wheat increasing every year, but, since 1858, it has, in each successive year, borne a larger proportion to the total cultivation. It has been already stated that it now occupies 38 per cent. of the entire area under tillage. In 1860 it occupied less than 30 per cent. of the same, and in 1859, only 26 per cent. In the year 1857 it equalled as much as 44·5 per cent. of the total cultivation; but the actual area under wheat has more than doubled since then, the extent of land devoted to that crop in that year having been only 80,155 acres, against 161,252 acres in 1861.

Oats.

31. The area under oats showed a slight diminution during the year, to the extent of 3,830 acres. The quantity sown, however, covered upwards of 86,000 acres, and was equal to 21 per cent. of the total cultivation.

Barley.

32. The land cropped with barley was $21\frac{1}{2}$ acres in excess of that under the same crop in the previous year. This cereal, as a grain crop, appears to be but little in favor with the Victorian farmers, the whole extent under it amounting only to 4,123 acres, or one per cent. of the total cultivation.

Potatoes.

33. An extent of land less by 2,780 acres than in the year previous was placed under potatoes during the year ending 31st March, 1861. A decrease in the area under this crop had also taken place in the previous year, to the extent of 2,404 acres. The land under potatoes in 1861 amounted to 24,841 acres, or about 6 per cent. of the land under all crops; but in 1860 it was nearly 8 per cent., and 1859, as much as 10 per cent. of the total cultivation.

Hay.

34. A falling off also took place in the land under hay, to the extent of 7,650 acres. In the previous year the increase under the same crop was 10,626 acres. Notwithstanding the diminution referred to, the hay crop during the year covered 91,000 acres, or nearly 22 per cent. of the acreage in cultivation. In 1860 it amounted to 27·5 per cent., and in 1859 to 29 per cent. It may be well to remark that the greater part of the hay grown in Victoria is of cereal grasses, principally oats: only on 875 acres, out of the 90,920 acres under the crop in 1861, was the hay of any other description, such as of rye grass, lucerne, &c.

Green forage.

35. The land under green forage during the year amounted to 17,661 acres, or 4·2 per cent. of the total cultivation. Of this, 11,640 acres were under permanent artificial grasses, 3,210 acres under cereals, principally barley, 1,091 acres under rye-grass and lucerne, 958 acres under maize, 625 acres under clover and vetches, and 137 acres under sorghum. The increase under the head of green forage during the year amounted to 7,310 acres, an extent nearly equivalent to the diminution which took place in the land under hay.

Minor crops, &c.

36. The aggregate of the land under minor crops, vineyards, gardens, orchards, and land in fallow during the year, amounted to 34,245 acres, or 8 per cent. of the total cultivation, against 20,823 acres, or rather less than 6 per cent. of the cultivation of the previous year. The minor crops showing increase were—maize, to the extent of 912 acres, or more than double, and mangel-wurzel, to the extent of 646 acres, or nearly three times the area of the previous year; beet, carrots, and parsnips, the area under which increased by 276 acres; turnips, showing an increase of 274 acres; sorghum, pease, beans, and millet, of 267 acres; carrots, of 163 acres; tobacco, of 41 acres; and onions and other crops, of 210 acres. The only minor crop showing a diminution in the area occupied by it was rye and bere, to the extent of 37 acres.

Maize.

Mangel-wurzel.

Beet, carrots, and parsnips.

Turnips, sorghum, pease, beans, and millet.

Carrots, tobacco, and onions.

Rye and bere.

Vines.

37. The land under vines in the year under notice amounted to 1,138 acres, 327 of which were planted during the year. 5,722 acres were devoted to gardens, and 1,576 acres to orchards; an increase on both, collectively, of upwards of 1,100 acres during the year.

Gardens and orchards.

Land in fallow.

38. The necessity existing in some districts for permitting the recovery of the land from the exhaustion consequent upon continuous cropping, is recognised by the fact that 20,457 acres were allowed to lie fallow during the year, as against 11,224 acres in the year preceding.

Tables referred to and indicated.

39. The proportion of the area of the more important crops in each county and district to the total cultivation in each, is given in Table VI., p. 7, as is also the same proportion for the entire Colony during each of the last six years. The area placed under cereal crops, green crops, and hay, by holders of allotments, classified as to size, is found in the last three columns of Table VIII., p. 8, and the proportion that each of those areas bears to the total land cultivated by each class is found in the three last columns of the succeeding table (Table IX., p. 9). The extent of land placed by each of the classes of landholders under wheat, oats, other cereals, green crops, hay, and green forage, gardens, &c., is minutely set forth for each county and pastoral district in Tables XIV. to XX., pp. 11 to 14, and the extent placed under the same crops in each county and district by landholders of the different classes, occupying their allotments under various kinds of tenure, is given in Table XXV., pp. 17 to 38. This general reference will be sufficient for the intelligent reader, and will save further more minute comment on my part. A report like this is not intended to be much more than suggestive. Those who take an especial interest in the subject, and have leisure to study it, will find ample material for examination in the carefully compiled tables published herewith.

PRODUCE.

PRODUCE.

Wheat.

Quantity of wheat grown to each individual of the population, 1858-1861.

40. The gross produce of the wheat crop during the year amounted to 3,459,914 bushels. This quantity, divided amongst the mean population

(541,012) living in Victoria during the year, would give 6·395 bushels to each individual—a proportion which the experience of former years has proved to be nearly sufficient for the requirements of the Colony. In 1860* the whole quantity of grown and imported wheat, flour, and bread available for consumption amounted to 7·16 bushels to the individual; in 1859† it amounted to 6·80 bushels, and in 1858 to 6·85 bushels. It thus appears that a very slight addition to the quantity raised would render the people of the Colony independent of imports, so far as breadstuffs are concerned.

Wheat grown to each individual, exclusive of Chinese.

41. Excluding the Chinese, however, the mean number of which during the year may have amounted to 24,000, and taking the residue of the population as the divisor, the produce per individual would be 6·69 bushels. The quantity of grown and imported breadstuffs to each individual, exclusive of Chinese, was 7·66‡ bushels in 1860, 7·40 bushels in 1859, and 7·38 bushels in 1858; by which figures it would appear that it will be necessary to grow about another bushel of wheat per head to meet the annual consumption of the Colony.

Average produce per acre of wheat, 1856–1861.

42. The average produce of wheat during the year (21·5 bushels per acre) was higher than in either of the three previous years. It exceeded the average per acre of 1860 by only a tenth of a bushel, but was one and a half bushel to the acre in excess of the crop of 1859, and ·8 of a bushel above that of 1858. In the year 1857 the average was 23·2 bushels to the acre, and in 1856, 26·9 bushels, or 1·7 and 5·4 bushels per acre in excess of the year under review; but the quantity grown in those years was comparatively small, and the probability is, that it was cultivated only on the very best land; for which reason any near approximation to a fair average of the Colony's productiveness as regards wheat could not then be formed. Wheat has since become a more general crop, and, from the large acreage devoted to it in all parts of the Colony, it is doubtless often sown now on indifferent as well as upon good land. It is satisfactory to find that under these circumstances so good an average as twenty-one and a half bushels to the acre for the entire Colony still obtains.

Oats.

43. It has been already stated that the land under oats was less than in the previous year by nearly 4,000 acres. Notwithstanding this, however, the gross produce of this crop exceeded that of 1860 by upwards of 80,000 bushels. This augmentation is accounted for by the average productiveness of the oat crop for the entire Colony having increased from 28·3 to 30·5 bushels per acre, the latter being the highest rate for the last five years, with the exception of 1858, when it averaged half a bushel more, or 31 bushels to the acre.

Average to the acre of oat crop.

Gross produce of oats compared with that of wheat.

44. The quantity of oats raised during the year amounted to 2,633,693 bushels; this, although the largest yield of oats that the Colony has ever produced, was less than the wheat crop by 826,222 bushels. In the years 1859 and 1860, the quantity of oats exceeded that of wheat, in the former year by 595,565 bushels, and in the latter by 257,480 bushels.

Barley.

45. Although a slight increase in the acreage under barley took place during the year, there was a diminution in the gross produce to the extent of upwards of 14,500 bushels. The average per acre also fell off from 24 to 20·3 bushels. The fact, however, of barley being a favorite crop for green fodder, always renders the returns of its produce more or less unreliable. A portion of the acreage under it is generally taken for that use, and the farmers, when making the statements necessary for the filling up of their schedules by the collectors, are apt to make either too large, or more commonly too small, an allowance for the portion so appropriated. The whole quantity raised is not large, amounting to less than 84,000 bushels, and therefore the mistake is not of great moment; and the high average obtained in some of the counties (31·3 bushels to the acre in Follett, 28·8

Average to the acre of barley crop.

---

* See *Statistical Notes*, First Series, Part II., Table XVII., p. 16.
† See *Statistical Notes*, First Series, Part I., Table LII., p. 50.
‡ See *Statistical Notes*, First Series, Part II., page 17.

bushels in Dundas, and 27·7 bushels in Heytesbury and Villiers), where probably greater accuracy was observed, proves that, should occasion require an extensive cultivation of barley, the soil and climate of Victoria are just as capable of producing that crop in perfection as any of the other cereals.

Potatoes and hay.

46. With regard to the produce of both potatoes and hay, a like satisfactory result has taken place, as has been already noted with reference to the oat crop, viz., that it was greater than in the previous year, while the acreage upon which it was grown was less than in that year. The gross produce of potatoes amounted to 77,258 tons, showing an average of 3·1 tons to the acre, against only 1·8 tons to the acre in 1860. The aggregate produce of hay was 144,211 tons, and the average 1·6 tons to the acre. The average of hay for 1860 was 1·4 tons to the acre.

Gross and average produce of potatoes.

Gross and average produce of hay.

Average produce of the principal crops in the different counties.

47. The average produce of each of the principal crops in each county and district, and that for the whole of the Colony, are given in Table IV., p. 6, with respect to which it may be remarked, that the highest average of wheat (28·3 bushels to the acre) was in Heytesbury; that of oats, the highest average (38·6 bushels to the acre) was in Talbot; that Follett showed the highest average of barley (31·3 bushels to the acre); that the highest average of potatoes (4·1 tons to the acre) was obtained in Follett and Gipps Land, and that the highest average of hay (2·4 tons to the acre) was grown in Follett and Ripon.

Average produce of wheat and oats on holdings under different tenures.

48. The average produce of wheat and oats upon holdings under different kinds of tenure is given in Table V., p. 7, whereby it is seen that, for the entire Colony, 21·4 bushels was the average acreable produce of wheat, and 30·2 bushels that of oats, upon freehold land unconnected with squatting runs; that upon leasehold land unconnected with runs, 21·6 bushels was the average of wheat, and 31·6 of oats; and that on the purchased land connected with stations, 20·6 bushels was the average of wheat, and 26·9 of oats. It thus appears that, although the freehold land showed a better average, as regards both wheat and oats, than did the land connected with runs, the land held under lease has shown a larger produce per acre of the same crops than did the land under either of the other tenures.

Average produce of wheat and oats on allotments of different sizes.

49. The wheat and oats produced on the average by holders of allotments, classified as to size, are given in Table X., p. 9, by which it is seen that the largest crops of wheat, in proportion to the acreage devoted to that crop, were raised by holders of lots between 100 acres and 200 acres in extent, on which the average was 21·9 bushels to the acre; and of oats, the best crops were raised by holders of lots between 50 and 100 acres, whose average was 31·6 bushels to the acre.

Tables referred to.

50. In the same table will also be found the average produce of the same two crops, on holdings of the different classes under the various kinds of tenure; and in Tables XXI. and XXII., p. 15, as well as in the last two columns of Table XXV., pp. 17 to 38, is found the gross produce of those crops on different sized holdings in each county and district.

Minor crops, produce of.

Maize.

51. In most cases the produce of the minor crops showed considerable increase. The quantity of maize raised amounted to upwards of 25,000 bushels, being an augmentation of nearly 18,000 bushels on the previous year's crop. The produce of this crop increased in a greater ratio than the acreage, as its average was better by five bushels to the acre than in the year previous.

Rye and bere.

52. The gross produce of rye and bere showed a diminution of 972 bushels, and its average produce was also less by 2·7 bushels to the acre; but sorghum, pease, beans, and millet, turnips, mangel-wurzel, beet, carrots and parsnips, cabbage and tobacco, all showed increase in both the gross and average produce; of the latter crop the produce raised was 1,255 cwt., being at the rate of 13·8 cwt. to the acre, an increase of 792 cwt. on the gross, and of 4·5 cwt. on the average produce. The gross weight of onions produced was upwards of 26,000 cwt., against only 1,000 cwt. in the year preceding.

Sorghum, pease, beans, millet, turnips, mangel-wurzel, beet, carrots, parsnips, cabbage, and tobacco.

Onions.

53. The cultivation of the vine still continues to increase. In addition to 1,896,939 vines which were growing upon 811 acres, according to the returns of 1860, 941,175 cuttings were planted during the year upon 327 acres, making a total of 2,838,114 vines upon 1,138 acres of land. Vines.

54. With regard to the produce of the vine crop, it must be borne in mind that, in consequence of its arriving at maturity later in the season than the other descriptions of produce, it is always necessarily taken for the previous year; and consequently the quantities severally of grapes sold, and of wine and brandy manufactured, as given in the present returns, are for the year ending 31st March, 1860, whilst the acreage under vines, and the number of vines, are given for the year ending 31st March, 1861.

55. It appears, in the year to which the statistics of vine produce refer, to have been more profitable to sell the fruit than to turn it into wine; as, whilst the grapes sent to market exceeded by 3,506 cwt. the quantity so disposed of in the previous year, the number of gallons of wine manufactured fell off to the extent 1,838 gallons. As it is calculated that sixteen and a half pounds of grapes, on the average, are sufficient for a gallon of wine, the quantity of the fruit sold for table use over and above that appropriated to the same purpose in the previous year, would, if converted into wine, have made 2,380 gallons, in which case the quantity of wine made in the Colony would have exceeded by 542 gallons that made in the previous year. This is not, however, commensurate with the increase in the number of vines coming into bearing, but the discrepancy is not surprising, since there is necessarily complication and uncertainty in returns which give the extent of cultivation for the current year, and the produce for the year before. The brandy made during the year amounted to 220 gallons, or an increase of 70 gallons on the quantity given in the previous year's returns. Increased quantity of grapes sold, and consequent falling off in the wine crop. Brandy.

56. Table XXVIII., p. 40, gives the numbers and ages of vines in each county and district. The gross totals for the Colony are given below, by which it appears that out of upwards of two millions of vines of which the ages were specified, less than a third were upwards of three years of age, the remaining two-thirds, unless in rare and exceptional instances, not being old enough to bear fruit. Ages of vines.

TABLE E.—VICTORIA.—The Ages of Vines throughout the Colony during the Year ending 31st March, 1861. AGES OF VINES. TABLE E.

AGES OF VINES.	Numbers.
Under one year	347,115
One year to two years	619,096
Two years to three years	402,393
Upwards of three years	664,469
Unspecified	805,041
TOTAL	2,838,114

57. The number of acres of grain crops reaped by machinery is also given in Table XXVIII., p. 40, by which it appears that in all the extensive agricultural counties this mode of harvesting the crops has become very common. The number of acres of grain crops so treated throughout the Colony during the year amounted to 27,832, or about a ninth of the whole area under cereals. In the preceding year only about 14,000 acres of crops were machine-reaped. Grain crops reaped by machinery.

58. The two following tables show at one view the land cultivated with each of the principal and minor crops, and the gross and average produce of each crop; also the proportion of each of the principal crops to the total cultivation, the whole being given for the two years ending 31st March, 1860 and 1861, together with the increase or decrease in the latter year and the average of the two years.

PRINCIPAL CROPS—1860-1861.

TABLE F.—VICTORIA.—The Total Extent of Land under Cultivation, the Number of Acres under each of the Principal Crops, the Gross Produce of each Crop, the Proportion per Cent. of the Acreage under each Crop to the Total Cultivation, and the Average Produce per Acre of each description of Crop during the two Years ending 31st March, 1860 and 1861; also, the Increase or Decrease of each of the Principal Crops in 1861, and the Average of each description of Crop during the two Years.

Land Tenure.

Attempts to obtain information as to tenure.

59. An endeavor to obtain returns of the description of tenure under which the several occupiers hold their land, was made for the first time in the year ending 31st March, 1860; but this attempt was not so successful as it might have been, as, in a considerable number of cases, the tenure was unspecified in the statistics for that year. It is satisfactory to observe, however, that an attempt to attain the same object in the year under review was entirely successful, not a single schedule having been returned with the tenure of the occupier unstated. The result is given in the following table, the classification adopted being the same as in the returns for 1860, viz., "freehold," "leasehold," and "connected with squatting runs :"—

Land occupied and cultivated by freeholders, leaseholders, and squatters. Table H.

Table H.—Victoria.—The Number of Holders, and the Number of Acres of Land Occupied and Cultivated; whether held in Freehold, Leasehold, or connected with Squatting Runs, and the proportions per cent. of each to the total quantity returned on the 31st March, 1861.

Connected with squatting runs ...	606	4·44	1,690,347¾	48·06	18,144½	4·32
Total	13,653	100·00	3,517,033½	100·00	419,380¼	100·00

Note.—In the above table the occupiers of freehold and leasehold land jointly in the one holding, if unconnected with a run, are set down as freeholders, and the land returned as cultivated by them is taken to be of their freehold, but the whole 116,885¾ acres of land held by them under lease has been added to the leasehold land in occupation; the quantity occupied by the 3,229 exclusively tenant farmers amounting only to 495,245 acres. Of the purchased land connected with squatting runs, only 140,878 acres, or no more than a twelfth part, is held under lease, all the rest being freehold.

Results compared.

60. On comparing the results in this table with those for the previous year, it is found that the relative proportions of the different classes of occupiers have undergone but little variation, but the proportion of the land held by freeholders to the entire quantity in occupation has diminished by 5 per cent.; that held by leaseholders has increased by 1 per cent., and that occupied by squatters has augmented from 44 to 48 per cent. The latter is now nearly equal to the quantity held by both the other classes, the exact figures being—1,690,347¾ acres in the occupation of squatters, and 1,826,686 acres in that of freeholders and leaseholders.

Proportions of land under each description of tenure, 1860-1861.

61. Of the land in cultivation about 66½ per cent. in both years was freehold; 29 per cent. in 1861, against 28 per cent. in 1860, was leasehold; and about 4½ per cent. in 1861, against 5½ per cent. in 1860, was connected with runs.

Tables respecting land tenure referred to.

62. In Table XXIII., page 16, further details will be found of the cultivation of the principal crops by the first two classes of holders, or those not in connection with squatting runs. In this table the holdings of the descriptions mentioned are classified according to size, and the gross number of acres as well as the quantity of acres in every thousand placed under each crop are set forth in separate columns.

63. The next table (XXIV., page 16), shows the same details (classification as to size excepted) for the holders of land under the several descriptions of tenure.

64. In the following table (XXV., pages 17 to 38) the number of holders, the extent of land occupied and cultivated, and the area placed under each of the principal crops, by freeholders, leaseholders, and stationholders, in allotments classified as to size, are given in detail for each county and pastoral district and for the entire Colony. The compilation of this table (XXV.) involved considerable labor, and will, it is hoped, be found not only

interesting but permanently useful, presenting, as it does, a minute index of the exact state of cultivation as practised in the Colony by landholders, of whatever size their allotments, and under whatsoever tenure they occupy the soil.

Live Stock.

Live Stock.

65. The quantity of Live Stock in the Colony in 1860 and 1861 are compared in the following table, by which it will be found that a decrease has taken place in the number of sheep, to the extent of upwards of 13,000; but this is more than compensated by the large increase in cattle, the numbers of which, in spite of the ravages of pleuro-pneumonia, have been augmented by 38,798; the number of horses has also increased by 7,248, and pigs by 10,294.

Table I.—Victoria.—The Number of Sheep, Cattle, Horses, and Pigs, on the 31st March, 1860 and 1861, with the Increase or Decrease of each at the latter period.

Live Stock compared, 1860-1861. Table I.

DATE.	Sheep.	Cattle.	Horses.	Pigs.
31st March, 1860	5,794,127	683,534	69,288	50,965
31st March, 1861	5,780,896	722,332	76,536	61,259
Increase ...	...	38,798	7,248	10,294
Decrease ...	13,231	...	...	...

Note.—As in previous years, the figures given represent nearly the whole number of sheep in the Colony; but there are no means of ascertaining the numbers of cattle, horses, and pigs kept in towns, and not running either upon town reserves, or upon purchased land, nor of those horses or working bullocks in the possession of road-carters.

Live Stock kept by farmers and squatters.

66. Further details respecting the Live Stock are given in Summary Tables XXVI. and XXVII., p. 39, which indicate the numbers of each description kept on land both connected and unconnected with stations, so as to distinguish the stock belonging to the squatters from that of the farmers. It thus appears that out of nearly six millions of sheep in the Colony, only 156,491, or less than 3 per cent., are depastured on farms or land not connected with squatting runs; but that of the cattle appearing in the returns nearly a third are kept apart from runs, whilst of the horses only about a third, and of the pigs no more than a twelfth, are the property of squatters.

67. In submitting this Report, I feel it my duty to state, that the leisure at my command has been insufficient to permit me to give the various tables anything like the careful analysis their importance merits. Enough, however, I hope, has been adduced to show the extraordinary progress which continues to be made in the development of the agricultural resources of Victoria.

I have the honor to be,
Sir,
Your most obedient Servant,
WILLIAM HENRY ARCHER,
Registrar-General.

The Honorable the Chief Secretary,
&c., &c., &c.

LIVE STOCK.

General Summary.

Table XXVI.—Showing the Number of Live Stock in Victoria in the month of March, 1861, distinguishing the quantity on Land unconnected with Stations from that on Crown or Alienated Land connected with Stations.

DESCRIPTION OF LAND.	DESCRIPTION OF STOCK.			
	Horses.	Cattle.	Pigs.	Sheep.
Farms and Land unconnected with Stations	49,935	223,663	56,157	156,491
Crown and Alienated Land connected with Stations ...	26,601	498,669	5,102	5,624,405
Total of Colony	76,536	722,332	61,259	5,780,896

Note.—The number of Horses, Cattle, and Sheep on Stations are obtained from the Assessment Returns, and the number of Pigs from the Agricultural Collectors. It may also be noticed that the Assessment Returns are made for a period some weeks earlier than that at which the Agricultural Statistics are taken.

LIVE STOCK.—SUMMARY OF VICTORIA.—COUNTIES AND DISTRICTS.

Table XXVII.—Showing the Number of Holders and Quantity of Live Stock held on the 31st March, 1861, on Land Alienated from the Crown unconnected with Stations.

COUNTIES AND DISTRICTS.	Number of Holders of Stock.	LIVE STOCK.				
		Horses.	Horned Cattle.		Pigs.	Sheep.
			Exclusive of Milch Cows.	Milch Cows.
